

Layers of Time

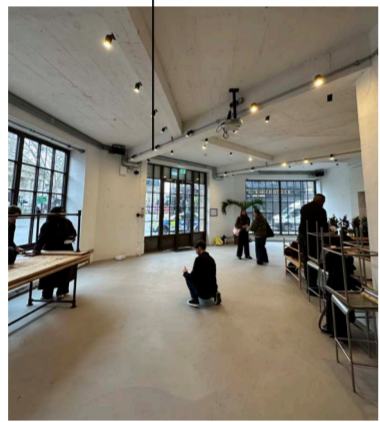

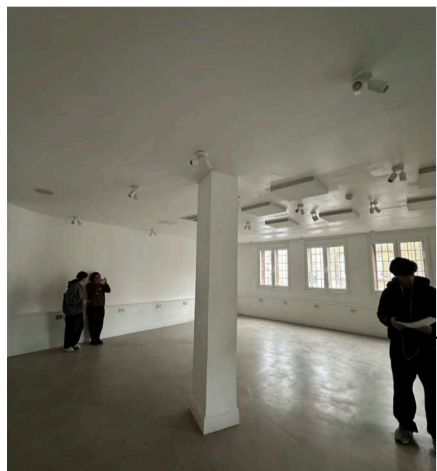

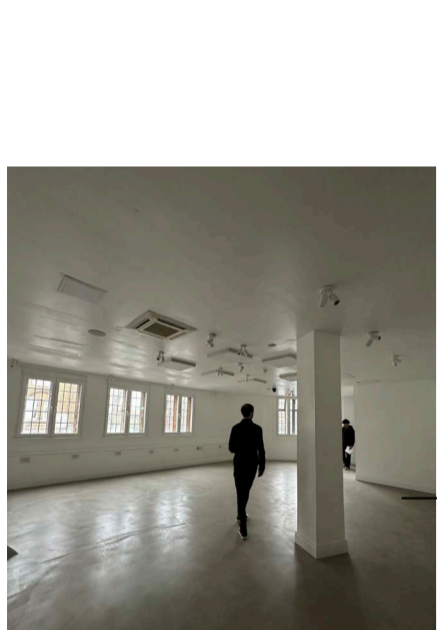

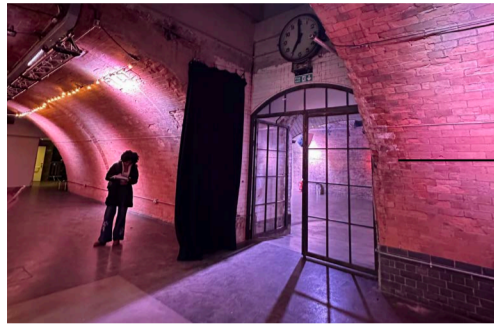

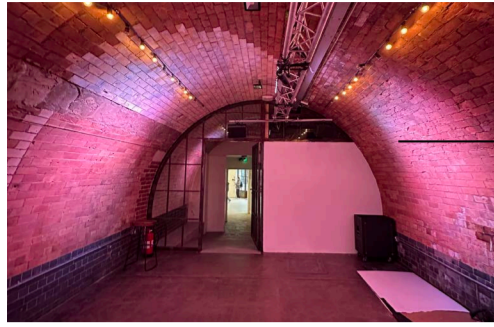

Located in Shoreditch, London, Kachette is a historic space with a rich and evolving history. This proposal explores how different layers of time can coexist within one interior, celebrating the building's heritage while introducing new spaces for creativity, learning, and cultural activities. Inspired by the idea of "a space within a space," new plywood structures are inserted within the existing brick tunnels, creating a clear contrast between old and new. This allows visitors to experience the building's past and present simultaneously. AI-generated images were used during the early stages to explore and test possibilities, but the final design was shaped through my own research, model-making, spatial testing, and critical design decisions, maintaining full creative control throughout the process.
