

# INTERACTIONS

A HOSTEL FOR THE PEOPLE OF 2325

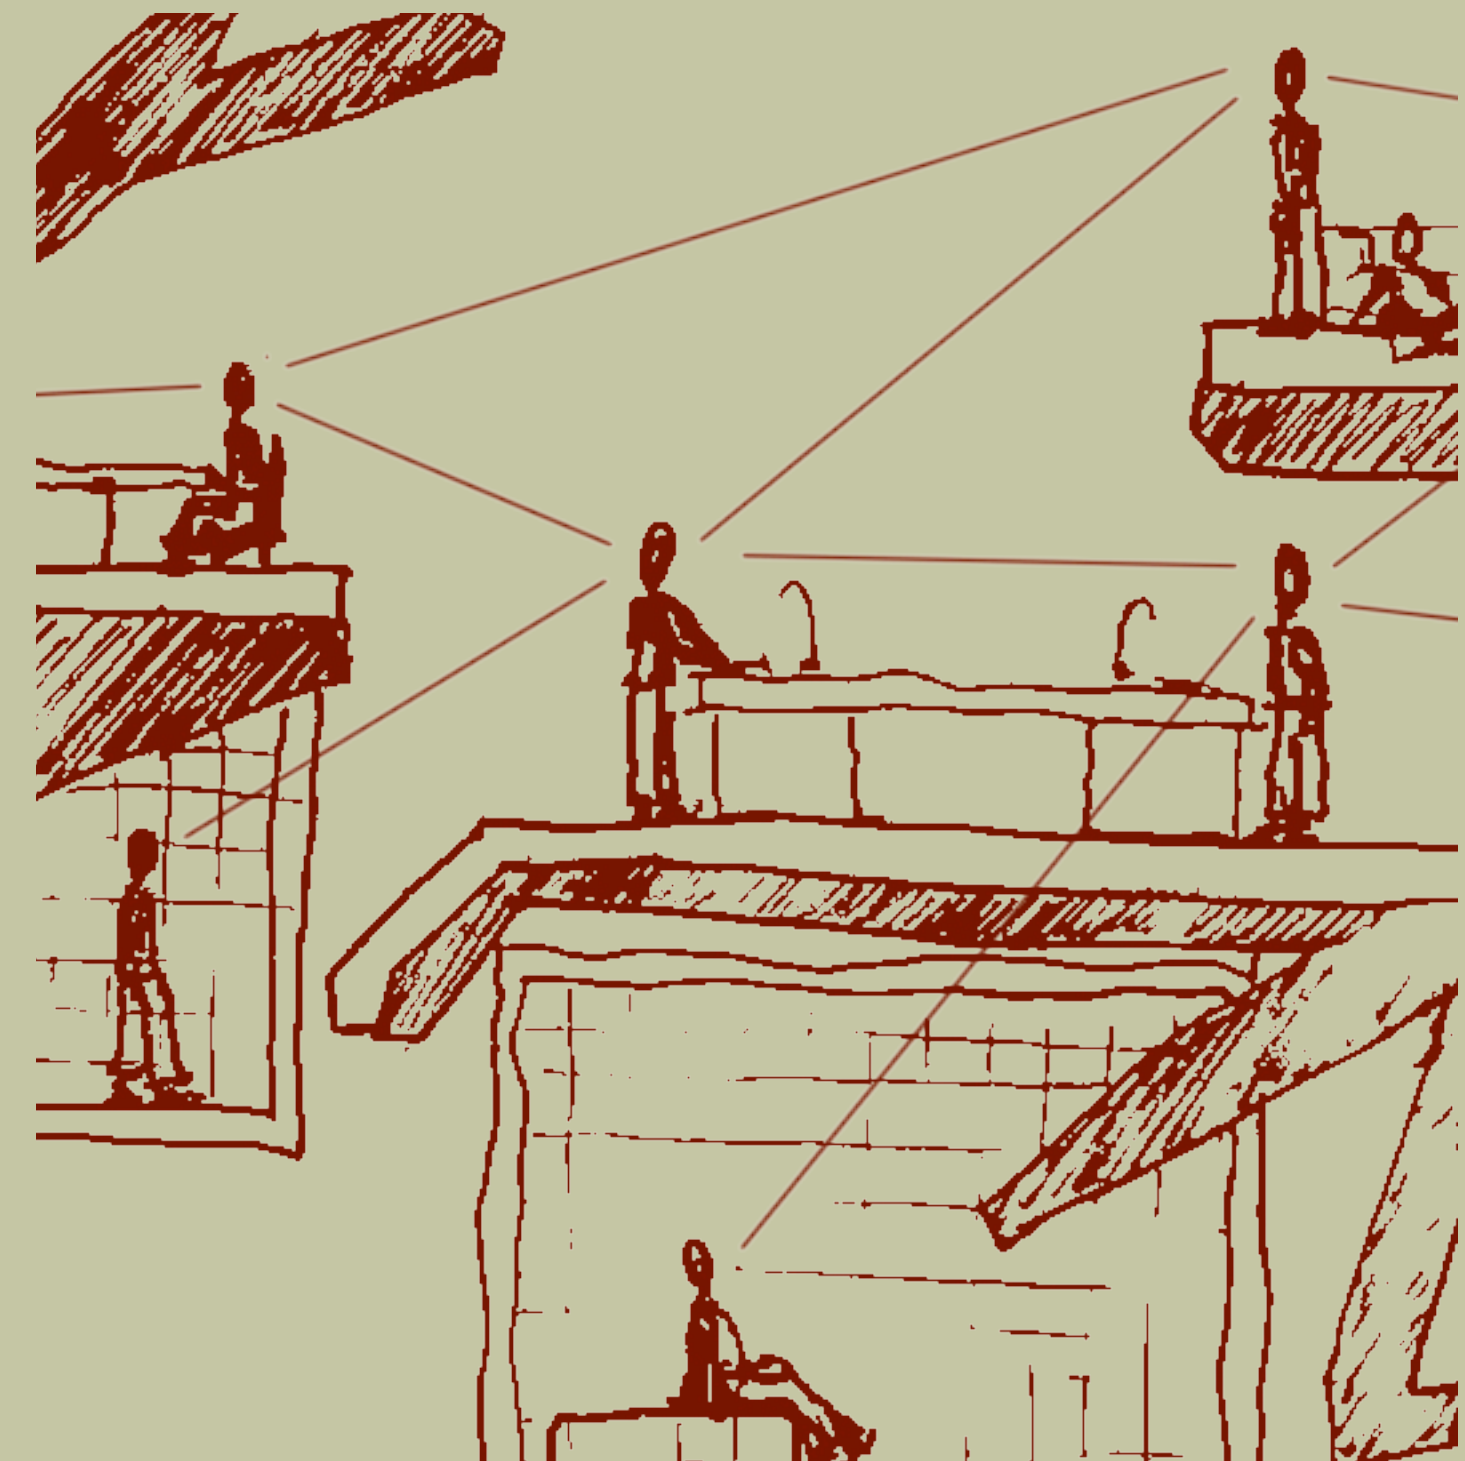

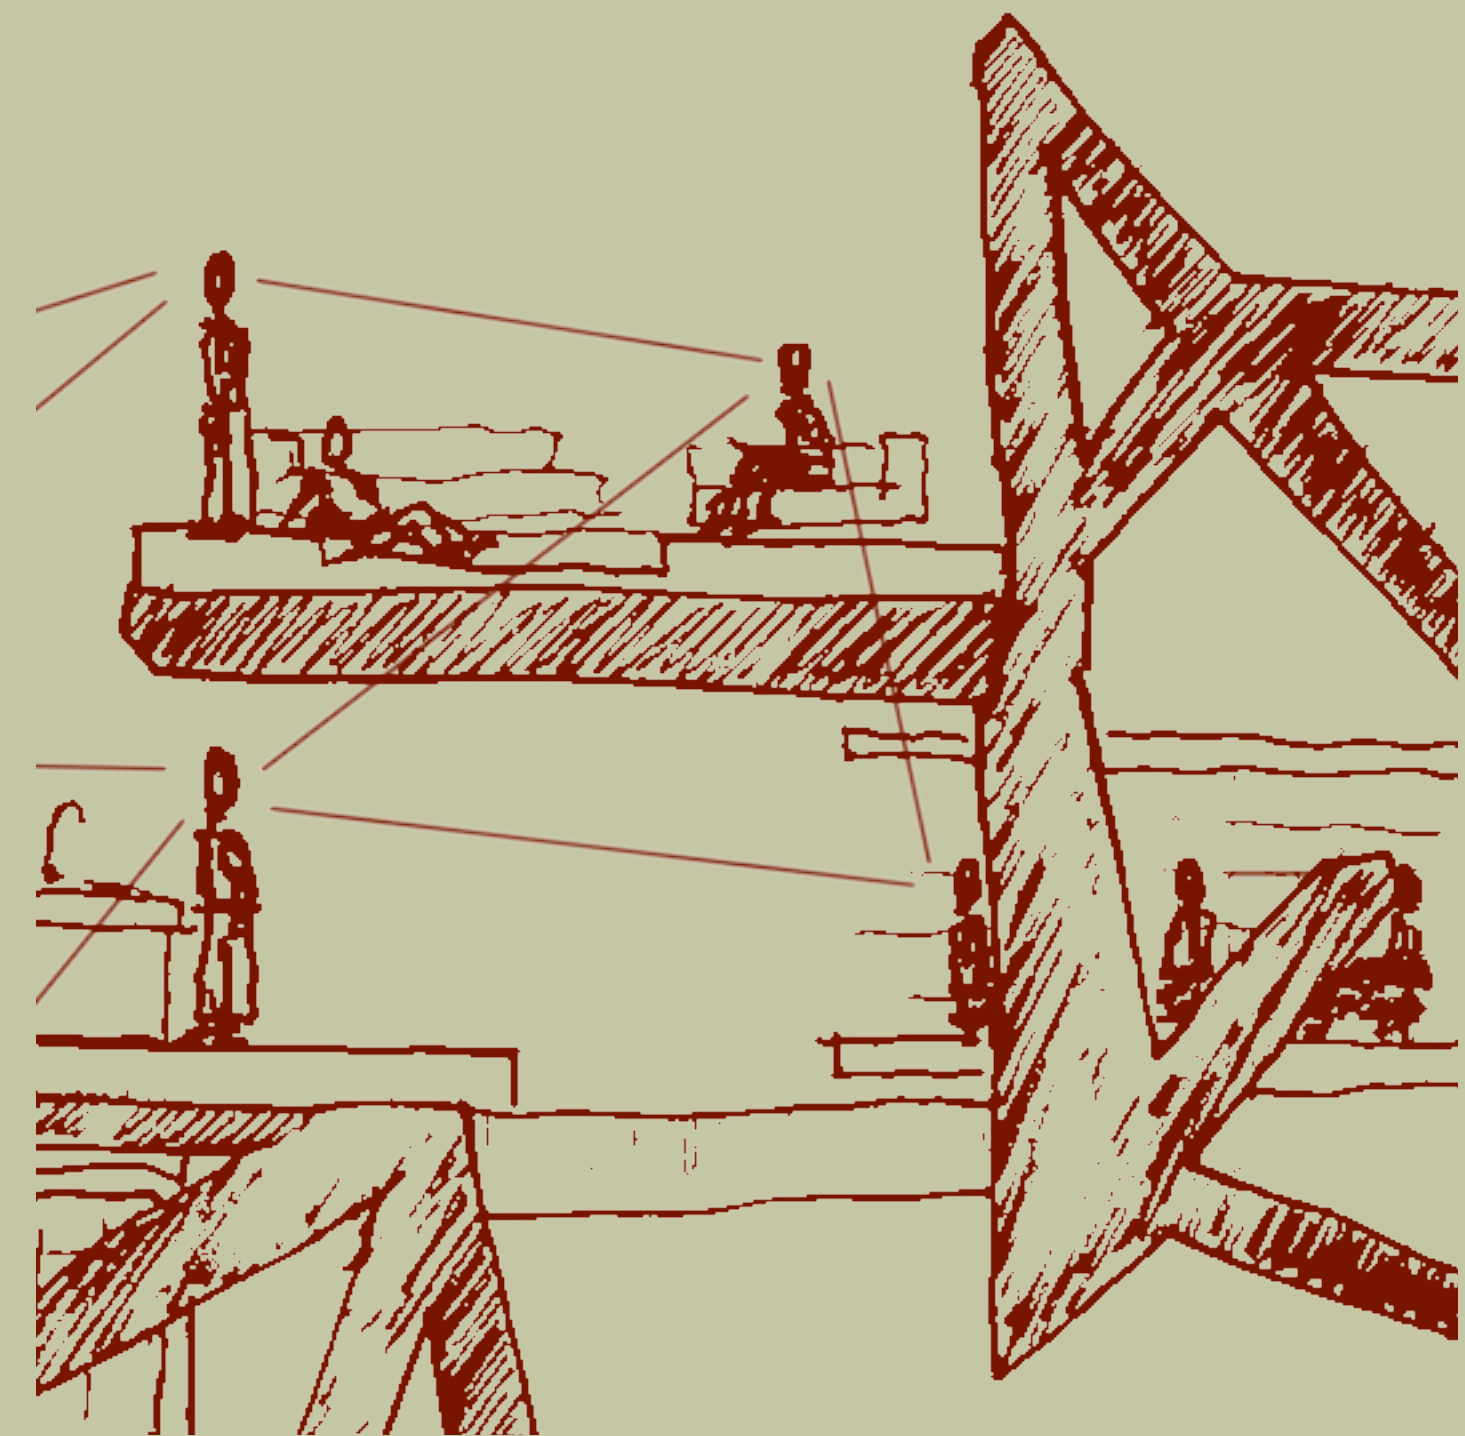

BALKI'S MORTIER

# INTERIOR FUTURES AWARD

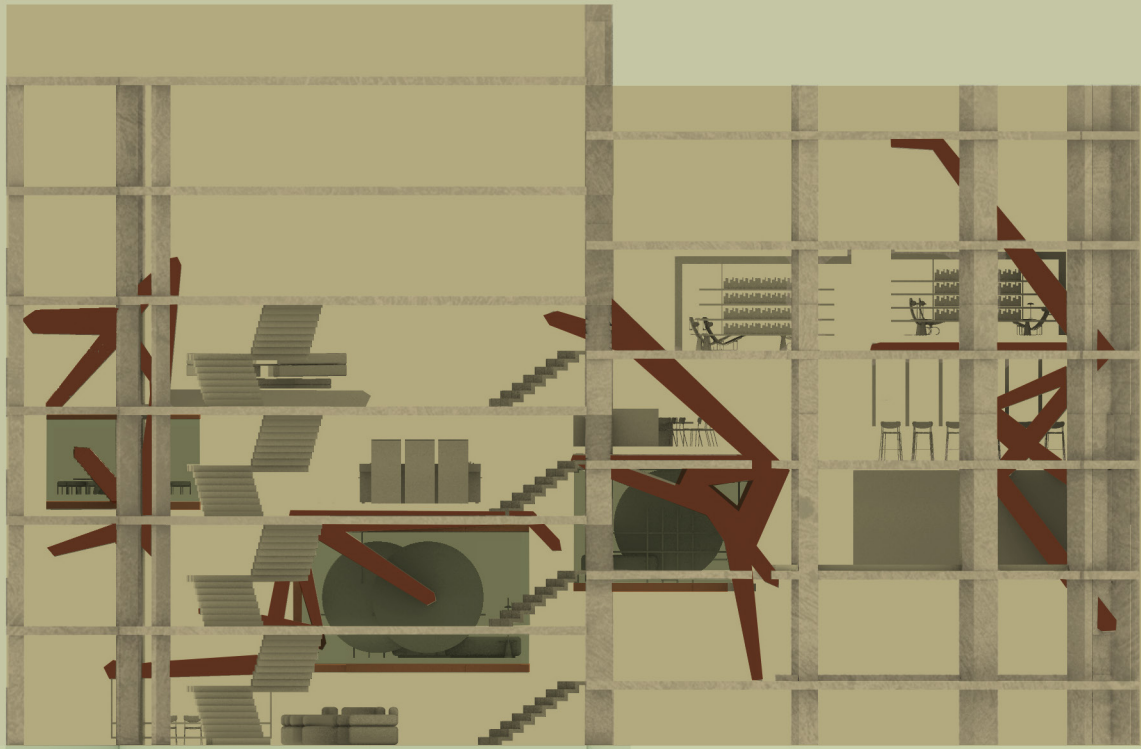

The world today, is centred around capitalism and individualism. Inequalities rise, instability terrifies and success rhymes with nepotism and corruption. The environment is threatened and humanity is forgotten. As this system has been ruling the world for decades, we now see its weaknesses and issues. Believably this system is going to either evolve or completely change. I believe and hope we will move forward with a resilient system centred around humans, where craftsmanship and cooperation rule in respect of the environment.

This project is set in this hypothetical future. It is a hostel but above all, it is a place for exchange, communication and cooperation. The programme of the hostel is based on people's behaviour in social spaces. The design aims to facilitate and encourage interactions between people to promote cooperation. The two main principles of this project are - visibility and openness - to promote exchange in this future centred around togetherness.
